

Unleash your data, empower your team

Excel at data-driven recruiting and advance your strategy with Lever Analytics.

Lever Analytics layers flexible reporting and analytical tools on top of your cleanly structured Lever recruiting data, enabling talent teams to assess and improve their recruiting processes.

Lever Visual Dashboards

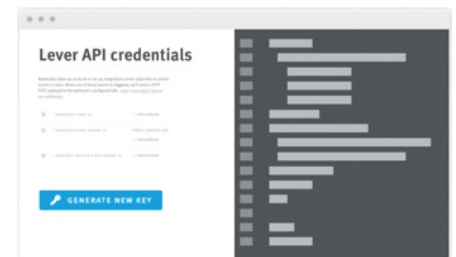

Included with Lever Hire, our robust reporting tools answer your most essential questions.

Powered by tableau

Lever Talent Intelligence

Powered by Tableau, our advanced analytics package helps you uncover unique data trends.

Lever Data API

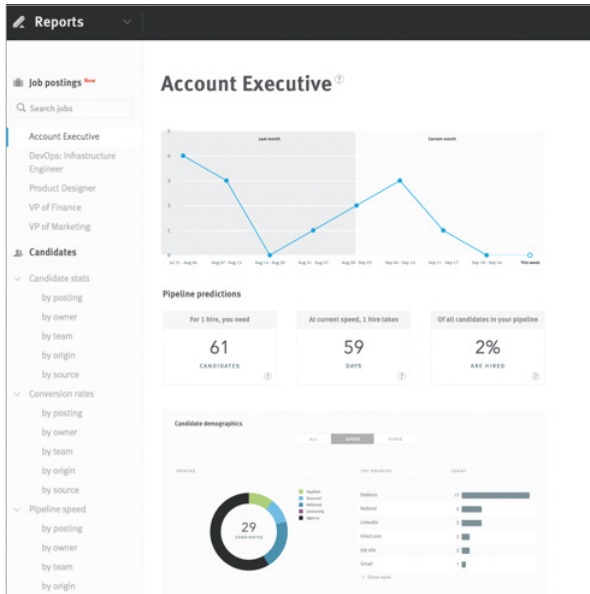

Our most sophisticated users can seamlessly export their recruiting data for full customization.

“Lever Analytics combines a rich set of data visualizations and insights with the power of a unified pipeline system to create a truly modern reporting platform.”

This is game-changing for any organization looking to make sense of what’s happening in the overall recruiting process.”

Brian Schneider
Head of Global Talent Acquisition, Change.org

Lever Visual Dashboards

Built-in, flexible reports to foster shared insights. With data visualizations, interactive graphs, conversion rates throughout the funnel and predictive analytics, you can gather intel on your entire hiring process in just a few clicks.

Lever Talent Intelligence

Advanced analytics in an approachable format. Sync your Lever data with Tableau® to dive deeper into your recruiting metrics and answer strategic questions.

Webhook configuration

Webhooks allow you to build or set up integrations which subscribe to certain events in Lever. When one of those events is triggered, we'll send a HTTP POST payload to the webhook's configured URL. [Learn more about how to use webhooks.](#)

- CANDIDATE HIRED [?] + Add webhook
- CANDIDATE STAGE CHANGE [?] <https://yoursite.com> + Add webhook
- CANDIDATE ARCHIVE STATE CHANGE [?] + Add webhook

Webhook signing token

To ensure the authenticity of event requests, Lever signs each request and posts the signature along with the other webhook parameters. A signature header will be included with all requests once a signing token has been generated. You can regenerate your token at any time.

[GENERATE TOKEN](#)

No token has been generated.

Lever Data API

Your data, customized to your needs. Lever's Data API enables you to export data from Lever and import it into any other Business Intelligence tool or system to create unique reports for your team.
